

Static Analysis Report (Sprint 3)

Project: Bonfire (Android, Backend, Web) | Tool: SonarQube Cloud | Date: Mar 17, 2026

1. Tools Used

Programming languages: Android: Kotlin/XML; Backend: JavaScript + HTML; Web: JavaScript + CSS + HTML.

SonarQube edition: SonarQube Cloud (hosted).

Where analysis ran: Cloud/GitHub-integrated analysis (SonarQube Cloud project analysis).

Trivy: Not performed for this sprint (no Trivy PDF available yet).

2. Required Metrics

Component	Quality Gate	Bugs	Vulnerabilities	Code Smells	Security Hotspots	Open Issues	Duplications
Android	Pass	0	0	20	0	20	0.0%
Backend	Pass	4949	0	9779	5	9842	21.0%
Web	Pass	50	0	75	3	84	0.0%
Overall	—	4999	0	9874	8	9946	—

Note: SonarQube Cloud also reported coverage as “No data available to display” for these projects in the provided dashboards.

3. Scope

Scanned: Bonfire-Android, bonfire-backend, and Bonfire-Web SonarQube Cloud projects.

Excluded: No explicit exclusions were identified in the provided SonarQube screenshots.

4. Trend (Sprint 2 → Sprint 3)

Component	Metric	Sprint 2	Sprint 3	Δ (S3-S2)
Android	Bugs	0	0	+0
Android	Vulnerabilities	0	0	+0
Android	Code Smells	20	20	+0
Android	Security Hotspots	0	0	+0
Android	Open Issues	20	20	+0
Backend	Bugs	4949	4949	+0

Backend	Vulnerabilities	0	0	+0
Backend	Code Smells	9778	9779	+1
Backend	Security Hotspots	5	5	+0
Backend	Open Issues	9841	9842	+1
Web	Bugs	42	50	+8
Web	Vulnerabilities	0	0	+0
Web	Code Smells	59	75	+16
Web	Security Hotspots	3	3	+0
Web	Open Issues	68	84	+16

Scope	Metric	Sprint 2	Sprint 3	Δ
Overall totals	Bugs	4991	4999	+8
Overall totals	Vulnerabilities	0	0	+0
Overall totals	Code Smells	9857	9874	+17
Overall totals	Security Hotspots	8	8	+0
Overall totals	Open Issues	9929	9946	+17

5. Reflection

The backend remains the most problematic area, accounting for nearly all open issues and the vast majority of bugs and code smells. For Sprint 4, we will focus on addressing high-impact backend reliability issues and reducing maintainability warnings through refactoring and targeted fixes, while also reviewing and resolving the remaining security hotspots in the backend and web projects.

Required Statement

"This static analysis was generated using automated tools during this sprint."
